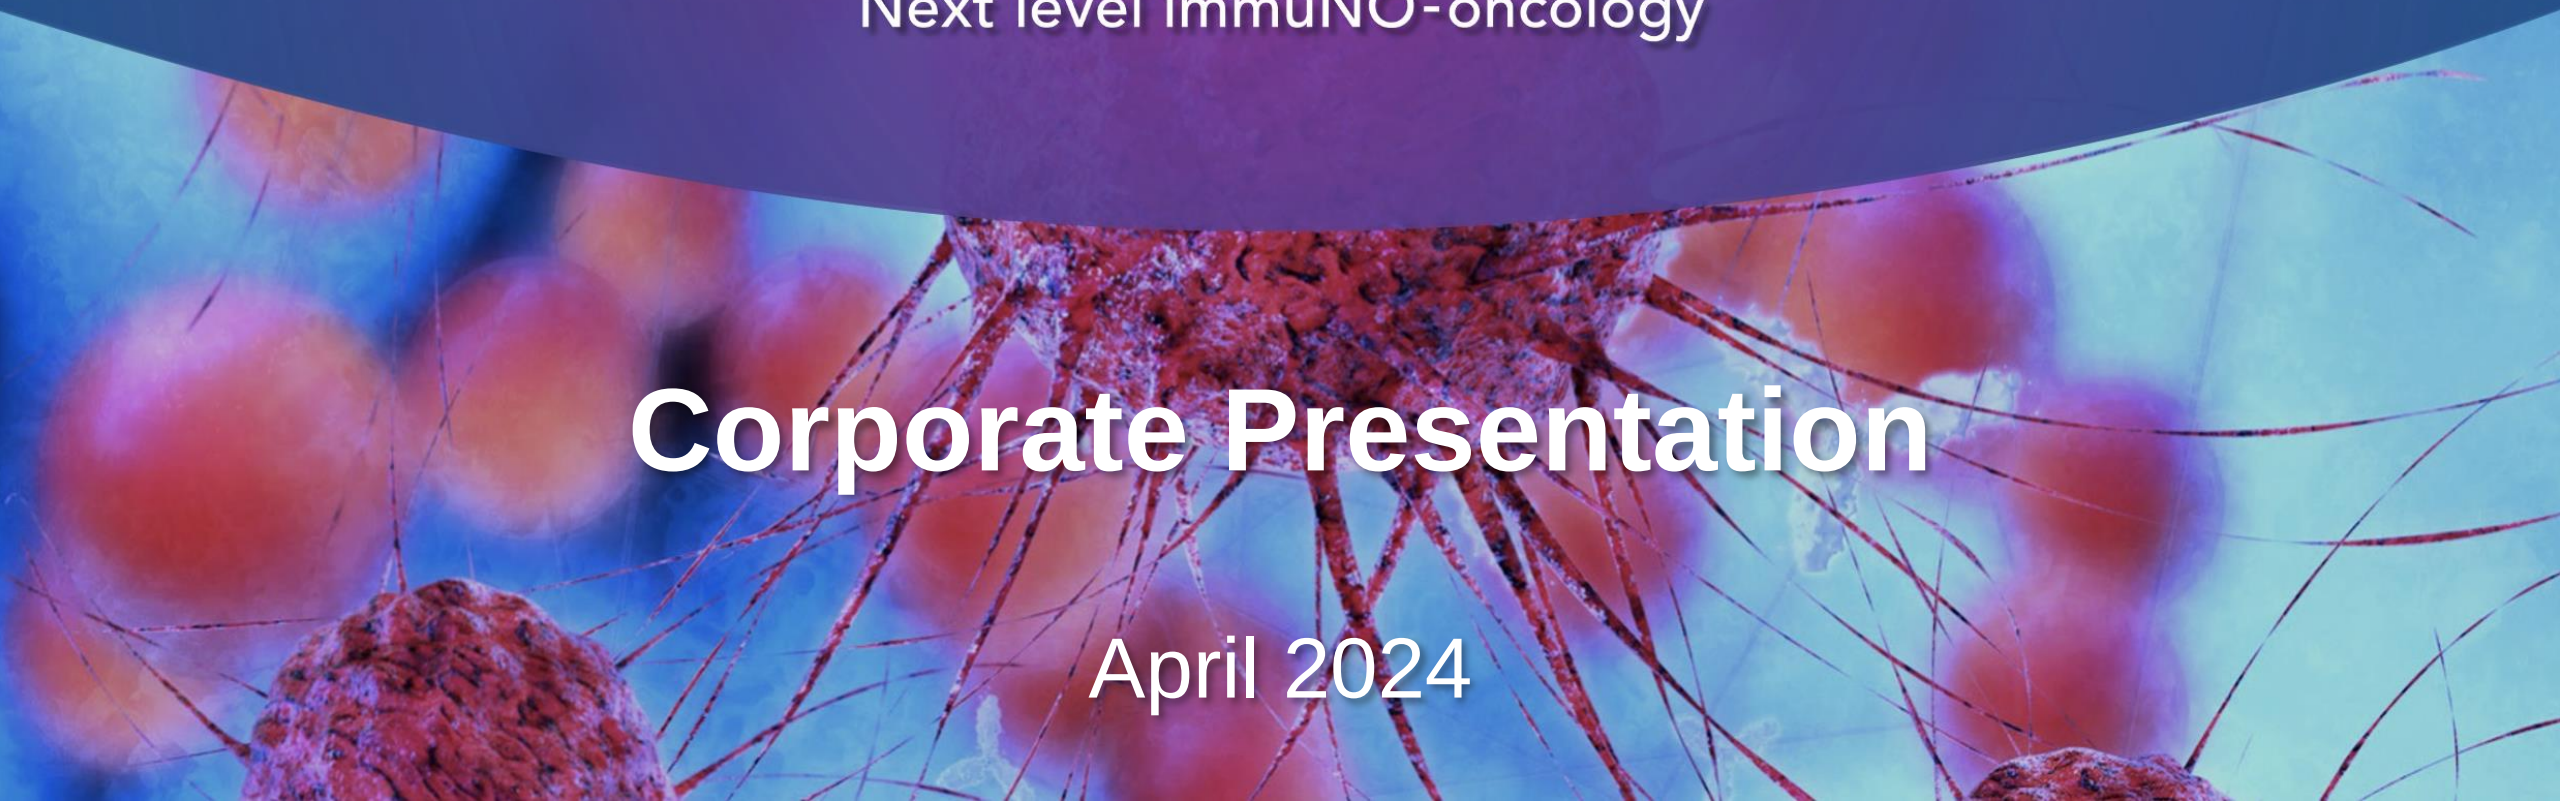
BEYOND CANCER™

Next level immuNO-oncology



Corporate Presentation

April 2024

Ultra-High Concentration Nitric Oxide (UNO) as a Potent Immunotherapy

BEYOND CANCER™
Next level immuNO-oncology

Upregulates Immune Activity

Utilizing **U**ltra-high concentration **N**itric **O**xide **(UNO)** to upregulate immune activity to treat solid tumors and distant metastases

Promising Early Phase 1a Results

First in human, Phase 1 clinical trial ongoing in unresectable, relapsed or refractory solid tumors

Combination Therapy

Combination therapy with immune checkpoint inhibitors (ICIs) to improve patient outcomes

Patented Delivery Approach

Differentiated MOA with 2 U.S. issued patents (expiry 2040) involving a novel delivery system

Beyond Cancer Leadership Expertise in Emerging Healthcare Companies and Clinical Oncology

BEYOND CANCER™
Next level immuNO-oncology

Selena Chaisson, MD
Chief Executive Officer

Bailard · TIGERGLOBAL · RCM · Stanford MEDICINE · Allianz Global Investors

- 16 years as Head of Healthcare Investments at Bailard managing the Emerging Life Science strategy
- Over 25 years of experience as a healthcare investor
- Stanford MD/MBA

Jedd Monson, MD
Chief Medical Officer

INTEGRATED ONCOLOGY NETWORK · cCARE CALIFORNIA CANCER ASSOCIATES FOR RESEARCH & EXCELLENCE · Stanford MEDICINE · City of Hope

- Founding partner of cCARE
- Practiced at City of Hope, Valley Radiotherapy Associates, and 21st Century Oncology
- Stanford MD, a member of American College of Radiology and American Society of Therapeutic Radiology & Oncology

Gavin Choy, PharmD
Chief Operating Officer

ADAPTIVE RESEARCH · apollomics · GT Biopharma, Inc. · CG PHARMACEUTICALS

- 20+ years of biopharmaceutical operating experience
- Integral member of four New Drug Applications (NDA) and seven Investigational New Drug (IND) filings
- PharmD from University of Southern California and MBA from University of California, Irvine

Board of Directors with Proven Business Record and Development Experience

BEYOND CANCER™

- Over 25 years of experience as a healthcare investor
- Stanford MD/MBA

Therapeutic Concentrations of Nitric Oxide (NO)

BEYOND CANCER™ Next level immuNO-oncology

Pulmonary

Low NO (<80 PPM)

Neonatal Hypertension: Currently approved in term and near-term (>34 weeks gestation) neonates with hypoxic respiratory failure

Antimicrobial

High NO (>80 PPM <400 PPM)

Antiviral
- Inhibition of viral enzymes[2]
- Blocking of RNA synthesis[3]
- Blocking of viral replication cycle by modifying target molecules essential for replication[3]

Antibacterial
- Mechanism attributed to DNA damage, bacterial enzyme inhibition, and induction of lipid peroxidation[1]

BEYOND CANCER® Next Level ImmuNO-oncology **Immuno-Oncology**

Ultra-High NO (UNO) (>10,000 PPM)

Immunoregulatory Functions[4]
- Increase
  - T/B cells
  - Dendrocytes
  - T memory cells
- Decrease
  - Regulatory T cells
  - MDSCs

Immunotherapy has Emerged as a Cornerstone Treatment for Solid Tumors

BEYOND CANCER™
Next level immuNO-oncology

Solid Tumors represent approximately 90% of adult human cancers[1], accounting for approximately 1.5 million annual new cases of most common cancer types in the United States[3]

Metastatic Disease is responsible for 90% of solid tumor deaths[2]

Proprietary UNO Delivery System Directly Targets the Tumor

BEYOND CANCER™
Next level immuNO-oncology

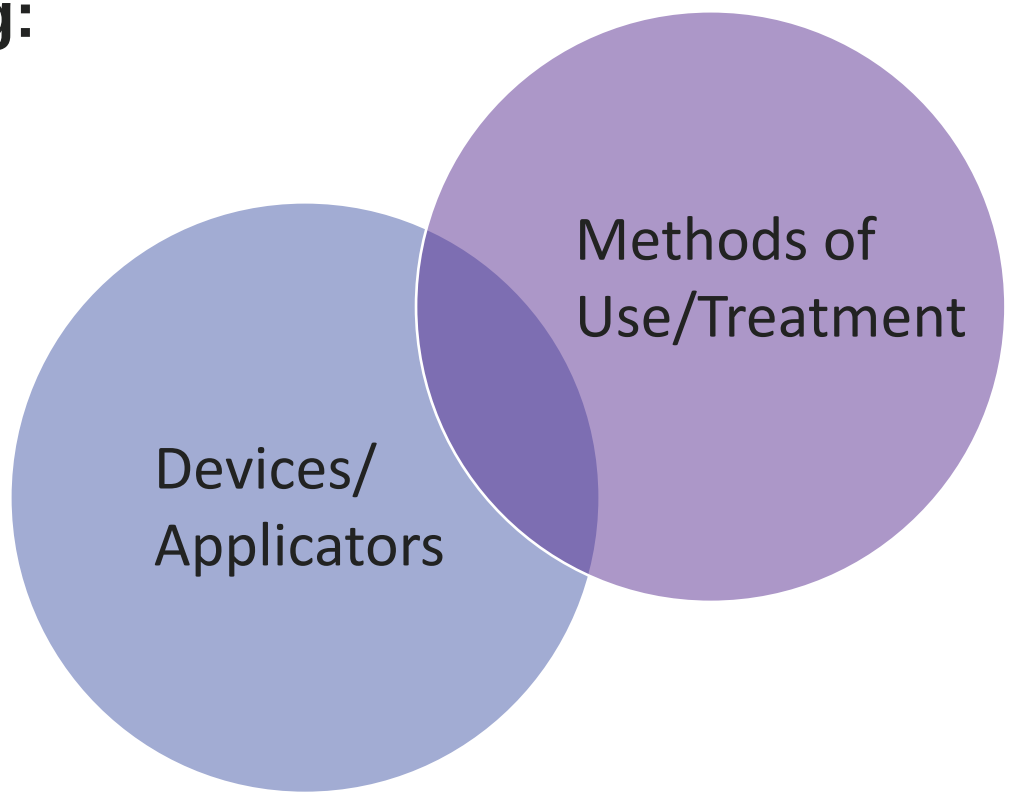
Novel system to deliver Ultra-high concentration Nitric Oxide (UNO)

- Advantages
  - Ability to obtain significantly higher intra-tumoral NO concentrations than endogenous or NO donor systems
  - Quick and simple procedure
- Optimizing delivery to meaningfully improve ease of use
  - Current high-volume system has produced promising results both preclinically and in Phase 1a
  - Low volume system expected for use in Phase 1b trial
- Encouraging toxicity profile allows for potential combination with approved therapies to enhance clinical outcomes

Intellectual Property Portfolio

Two issued U.S. patents (expiry 2040), with more pending from patent families including:

- UNO monotherapy for the treatment of solid tumors
- UNO in combination with checkpoint therapies and other anti-cancer agents
- Delivery systems
- Delivery applicators



Platform Technology Targeting Multiple Solid Tumors

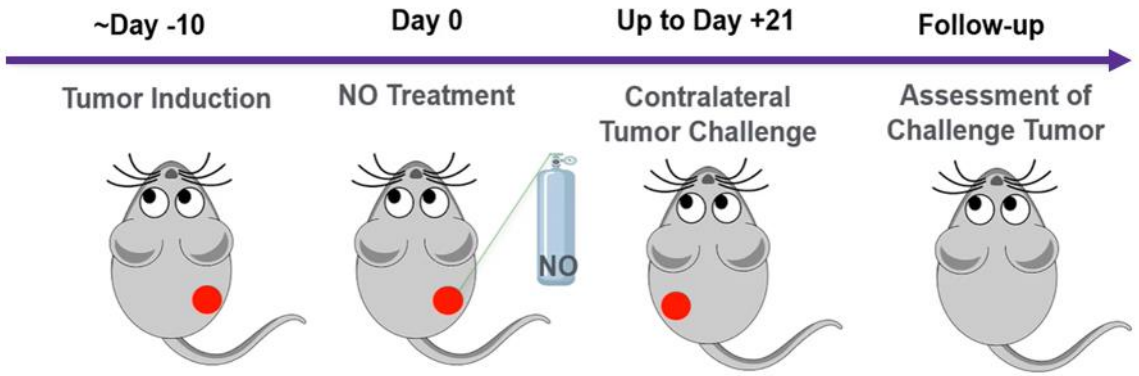
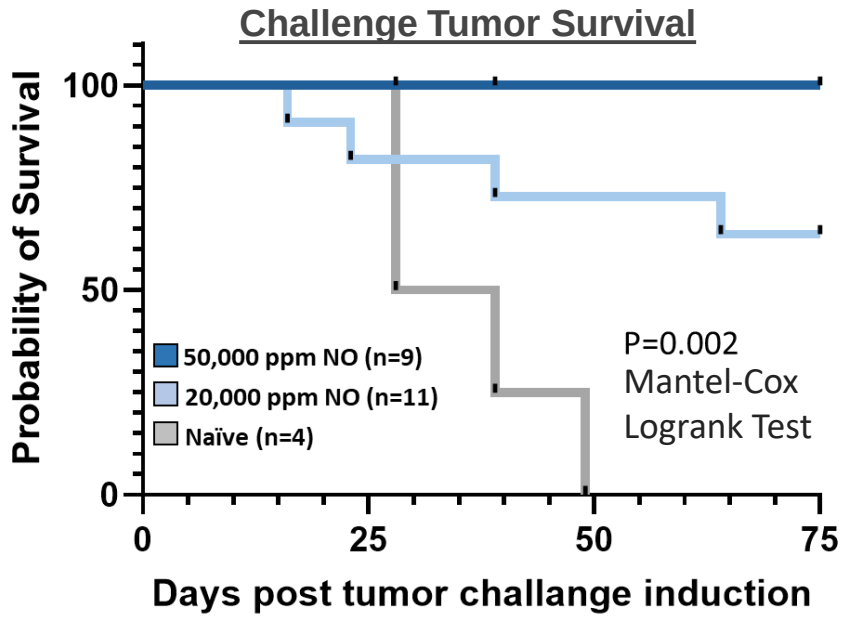
UNO Preclinical Data Demonstrates Immune Response

UNO in CT26 Challenge Tumors In Vivo Showed Evidence of Dose-Dependent Effects on Survival



Challenge assay:

- CT26 study mice treated with 20,000 or 50,000 ppm NO for 5 minutes.
- Naïve mice inoculated with the same cancer cells served as an internal control.
- Up to 21 days post NO treatment, all mice were re-inoculated with colon cancer cells (CT26 cells) as a challenge tumor and survival was monitored.



Survival Results at Day 75:

- 100% of 50,000 ppm NO mice alive
- 64% of 20,000 ppm NO mice alive
- 0% of naïve mice alive

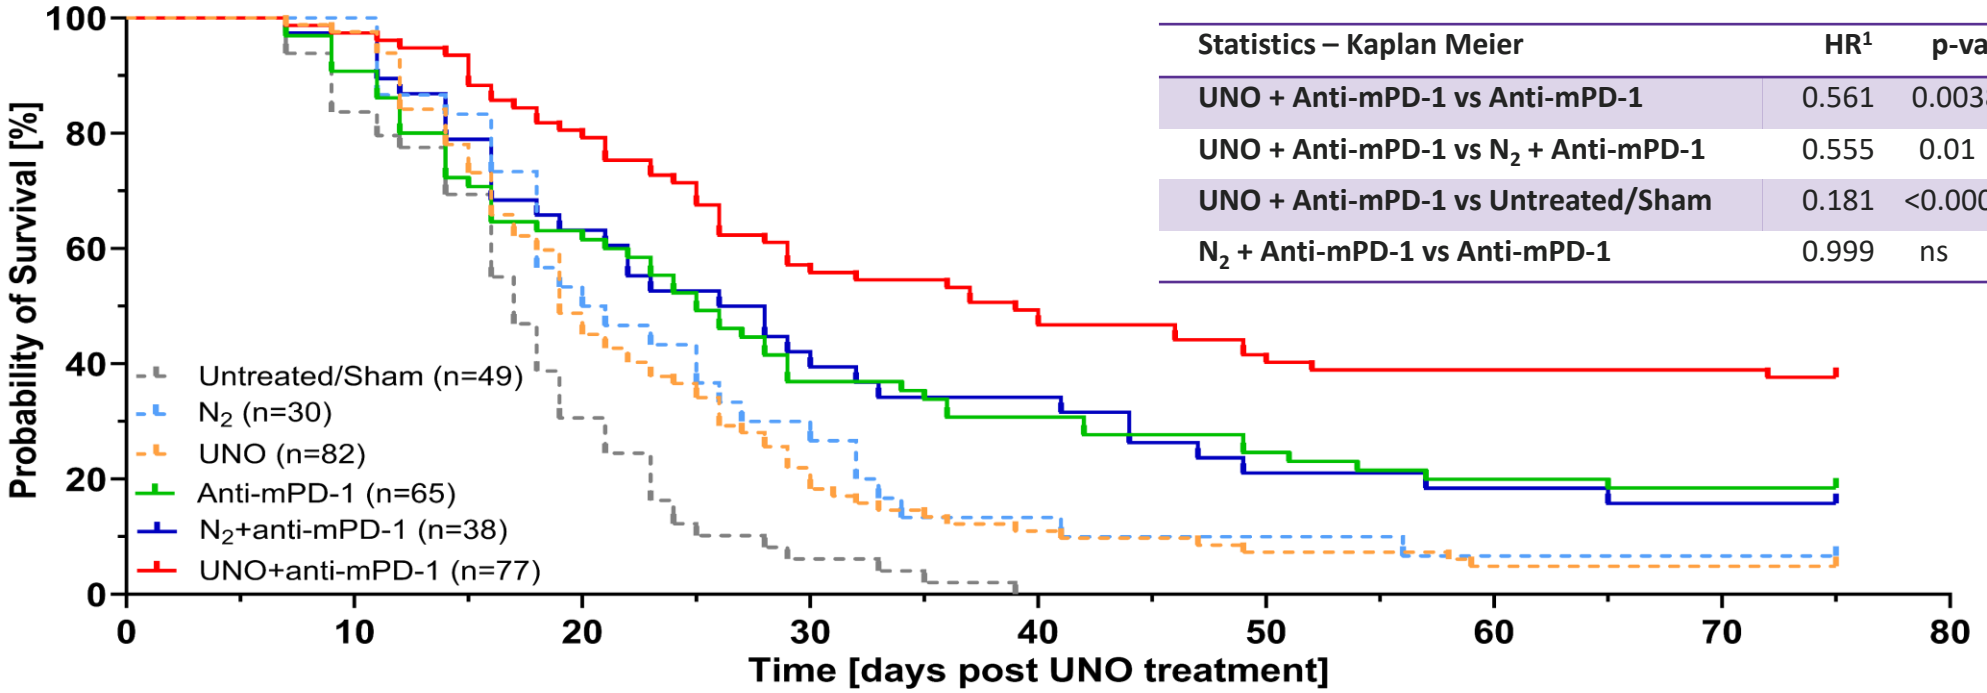
Effect of a Single UNO Treatment and Anti-mPD-1 on Mice Survival

BEYOND CANCER™
Next level immuNO-oncology

The combination of Ultra-high concentration NO with anti-mPD-1 improved outcomes and mice survival compared to UNO or anti-mPD-1 alone, as UNO assists the immune system in overcoming anti-mPD-1 resistance.



Statistics – Kaplan Meier	HR[1]	p-value[1]	[95% CI]
UNO + Anti-mPD-1 vs Anti-mPD-1	0.561	0.0038	[0.379, 0.830]
UNO + Anti-mPD-1 vs N_2 + Anti-mPD-1	0.555	0.01	[0.354, 0.869]
UNO + Anti-mPD-1 vs Untreated/Sham	0.181	<0.0001	[0.115, 0.286]
N_2 + Anti-mPD-1 vs Anti-mPD-1	0.999	ns	[0.644, 0.1.551]

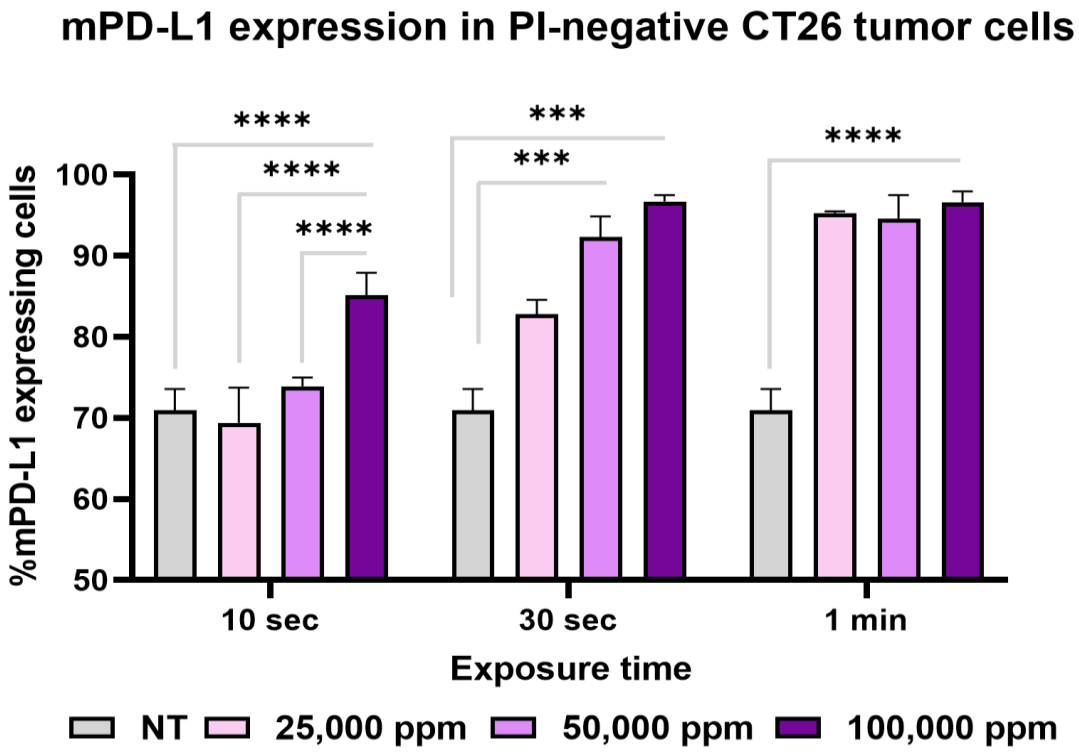
Pooled data across studies of 5 or 10-min UNO and anti-mPD-1 (5 or 10 mg/kg) treatment – survival data.

[1]Hazard ratio and p-value derived from Cox proportional hazard model.

Experimental model: CT26; Mouse model: Balb/c mice.
UNO treatment regimen: 50,000 or 100,000 ppm injected for 5 or 10 minutes, at 0.2 LPM.
Anti-mPD-1 dosing started at days (-2) to (+2). 5 or 10 mg/kg doses injected every 2-3 days, 4-5 doses in total.
All studies were conducted under approved IACUC protocols.

Data presented at the EORTC-NCI-AACR Annual Meeting, October 2023

UNO Upregulates mPD-L1 Expression at Day 5



- mPD-L1 expression 5 days after exposure to UNO
- Two-way ANOVA, multiple comparison test, ***P<0.001, ****P<0.0001.

Scientific Advisory Board

Frederick M. Dirbas, MD

Assoc. Prof. of Surgery, Div. of Surgical Oncology,
Stanford University School of Medicine

- Internationally acclaimed surgeon and pioneer in the field of breast cancer
- Published nearly 50 articles in peer-reviewed journals

Mark D. Pegram, MD

Assoc. Dean for Clinical Research Quality,
Stanford University School of Medicine

- Suzy Yuan-Huey Hung Endowed Professor of Medical Oncology at the Stanford University School of Medicine
- Medical Director of the Stanford Clinical Translational Research Unit

Sunil J. Panchal, MD

President of the
National Institute of Spine and Pain

- Minimally invasive spine and interventional pain specialist
- Editorial reviewer for *Clinical Researcher, Anesthesia and Analgesia, Pain, Pain Medicine,* and *the Clinical Journal of Pain*
- Former Chair of National Comprehensive Cancer Network Pain Panel

Phase 1a Designed to Establish 3 Key Objectives

BEYOND CANCER™
Next level immuNO-oncology

Primary Objectives:
1. Determine safety profile
2. Determine maximum tolerated dose (MTD) and/or optimal biologically effective dose (OBD)
3. Recommend Phase 2 dose (RP2D)

Secondary Objective: Anti-tumor activity of single intra-tumoral escalating UNO101 dose per RECIST v1.1, iRECIST

Exploratory Objectives: Biomarkers predictive of response via itRECIST

Major Eligibility Criteria
- ≥ 18 years of age
- ECOG PS 0 – 3
- Unresectable, cutaneous or SQ primary or metastatic tumor
- Measurable disease
- Tumor 4.5 mm – 30 mm

Part A: Dose Escalation
3 + 3 Scheme
Follow-up to Day 21
(Max N = 18)

Cohort 1: 25,000 ppm gNO over 5 minutes (expansion to 6 patients)

Cohort 2: 50,000 ppm gNO over 5 minutes

Cohort 3: 100,000 ppm gNO over 5 minutes

UNO is Well Tolerated and Demonstrated Proof of Concept

- Local administration of UNO is **well tolerated** in the initial cohort
- **Immune biomarkers** compare favorably to previously published murine data
- **Demonstrated proof of concept with** early response observed on Day 7 in a heavily pretreated squamous cell carcinoma
- Next Steps:
  - Advance to subsequent trial cohort
  - Combine with Immune Checkpoint Inhibitors (ICIs)
  - Introduce repeat dosing

Low Volume Study: Primary Tumor Results

BEYOND CANCER™ Next level immuNO-oncology

BC-001-68B-R4

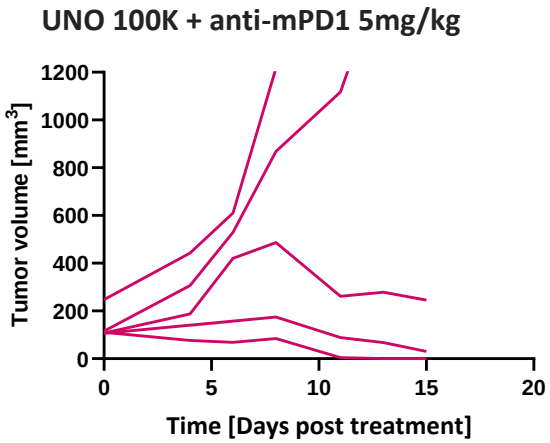
Tumor Shrinkage is seen in 3/5 tumors in UNO combo arm vs. 0/5 in N_2 combo arm at Day 15

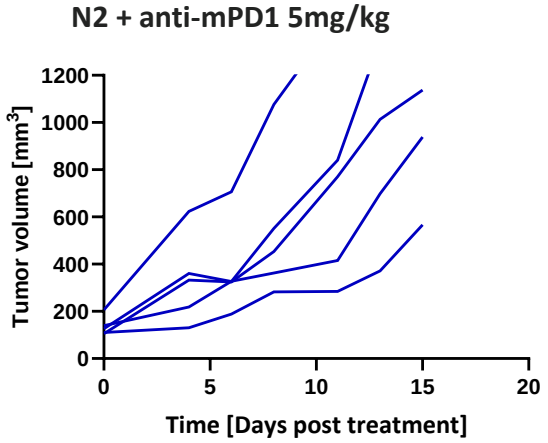
Experimental Conditions

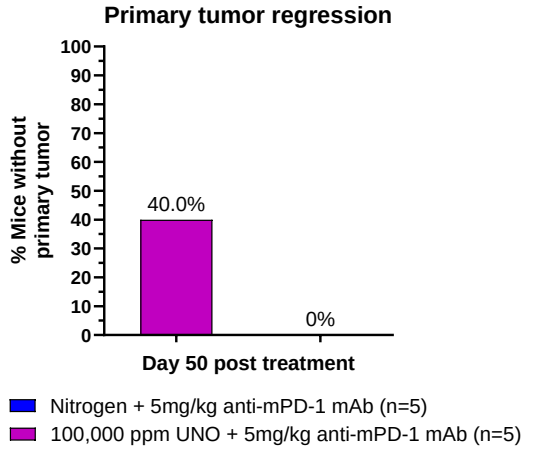
- 100,000 ppm NO + anti-mPD1 vs. N2 + anti-mPD-1 (5mg/kg)
- Treatment time: 2.5 min

Results

- 40% of UNO-treated tumors regressed through Day 50
- No safety events







Proposed Design: Phase 1b BC-ONC-01

Hypothesis: Can UNO therapy convert "cold tumor" → "hot tumor"

Major Eligibility

- ≥ 18 years of age
- ECOG PS 0 – 3
- Unresectable, cutaneous or SQ primary or metastatic tumor
- Relapsed/refractory or prolonged stable disease (≥ 12 weeks) on any PD-1

Phase 1b (Low Volume)
(n=20)

Primary Objective: To assess preliminary efficacy by objective response rate (ORR) and duration of response (DOR) per Response Evaluation Criteria in Solid Tumors (RECIST) version 1.1, and secondarily immune-related RECIST (iRECIST).

Secondary Objectives: To assess progression free survival (PFS) and overall survival (OS), clinical benefit rate (CBR: CR+PR+SD ≥ 6 months), time to response (TTR) by RECIST and iRECIST, and incidence and severity of non-serious adverse events, including immune related adverse events (irAEs).

Exploratory Objectives: To assess biomarkers that may be predictive of anti-tumor activity of an intratumoral UNO201 injection.
